Tour Description

This creative climb is one of the most popular African trekking tours. It joins two of the most scenic routes up Mount Kenya, Sirimon and Chogoria, producing a remarkably diverse and spectacular trek. Sirimon coming off the west of Mount Kenya passes through the dry side of the mountain with its giant trees and rocky terrain, and the descent onto the Chogoria path is exactly different with its lush bamboo and highland forests.

The final night time ascent of Point Lenana can be as difficult as any ascent in East Africa, but the rest of the trek is generally considered easier than either Kilimanjaro or the Rwenzoris, and this is the most likely climb for actually seeing big game.

Accommodation on this hike is in mountain huts. Nonetheless, if you prefer to camp you can do so on all nights on the mountain.

HOW TO RECOGNISE ALTITUDE RELATED ILLNESS

At high altitudes the amount of oxygen decreases dramatically. This can result in medical urgency that must be a concern to every hiker.

AMS (Acute Mountain Sickness)

Signs include: Headache, nausea, fatigue, malaise, loss of appetite and difficulty in sleeping.

Treatment

Slow down, stay in camps, drink water and rest while the body adjusts to the altitude. If symptoms persist after 48 hours descend.

HAPE (High Altitude Pulmonary Aedema)

Symptoms include: Shortened breath during exercise progressing to shortened breath while resting, a dry cough deteriorating to a frothy sputum, audible gurgling (rales) from the chest area, increased heart and breathing rate.

Treatment

Descend immediately and seek medical attention. Descending is the treatment. It can progress quickly to a point where the patient cannot walk. It doesn't improve with rest at the same altitude.

HACE (High Altitude Cerebral Aedema)

Symptoms include:- Ams that progress to severe headaches, loss of co-ordination, slurred speech, irrational behaviour, coma and death.

Treatment

Descend immediately, Hace can quickly progress to lethal stage.

Prevention of AMS, HAPE and HACE

Allow 2 nights at 10,000ft or at higher nuts at around 14,000ft Before proceeding higher, increase fluid intake to 4-6 liters per day. Avoid extreme physical exertion and eat a light diet rich in carbohydrates. Take symptoms seriously. Rest and acclimatize if Ams is suspected. Report to ranger rescues station and descend immediately if Hape or Hace is suspected.

However it is important to drink plenty of water slowly to allow your body get used to the altitude.
