Tour Description

The Lemosho route approaches Kilimanjaro from the west. Rather than simply intersecting Shira Plateau (like Machame), Lemosho crosses it from Shira Ridge to Shira 2 Camp, in a pleasant hike. Climbers encounter low traffic until the route joins the Machame route. Afterward, Lemosho follows the same route through Lava Tower, Barranco, and Barafu, known as the southern circuit.

The route approaches Mount Kilimanjaro from the west, beginning with a long drive from Moshi to Londorossi Gate. From there, the first two days are spent trekking through the rain forest to Shira Ridge. The Lemosho route crosses the entire Shira Plateau from west to east in a pleasant, relatively flat hike. Crowds are low until the route joins the Machame route near Lava Tower. Then the route traverses underneath Kilimanjaro's Southern Ice Field on a path known as the Southern Circuit before summiting from Barafu. Descent is made via the Mweka route.

Here we catch our first glimpse of Kibo across the plateau.

Shira Plateau is one of the highest plateaus on earth.

- ⇒ **Hiking Distance:** 5 km / 3.12 miles
- ⇒ **Hiking Time:** 4 – 5 hours
- ⇒ **Habitat:** Alpine desert

We begin the day by descending into a ravine to the base of the Great Barranco Wall. Then we climb the non-technical but steep, nearly 900 ft cliff. From the top of the Barranco Wall we cross a series of hills and valleys until we descend sharply into Karanga Valley. One more steep climb up leads us to Karanga Camp. This is a shorter day meant for acclimatization.

- ⇒ **Hiking Distance:** 4 km / 2.5 miles
- ⇒ **Hiking Time:** 4 – 5 hours
- ⇒ **Habitat:** Alpine Desert

We leave Karanga and hit the junction which connects with the Mweka Trail. We continue up to the rocky section to Barafu Hut. At this point, you have completed the Southern Circuit, which offers views of the summit from many different angles. Here we make camp, rest and enjoy an early dinner to prepare for the summit day. The two peaks of Mawenzi and Kibo are viewable from this position.

Day 8 - Barafu Camp – Uhuru Peak – Mweka Camp

- ⇒ **Elevation:** 4,673 m / 15,331 ft – 5,895 m / 19,341 ft – 3,068 m / 10,065 ft
- ⇒ **Hiking Distance:** 17 km / 10.6 miles
- ⇒ **Hiking Time:** 12 – 13 hours
- ⇒ **Habitat:** Arctic then Rain forest

Very early in the morning (around midnight), we begin our push to the summit. This is the most mentally and physically challenging portion of the trek. The wind and cold at this elevation and time of day can be extreme. We ascend in the darkness for several hours while taking frequent, but short, breaks. Near Stella Point (18,900 ft), you will be rewarded with the most magnificent sunrise you are ever likely to see coming over Mawenzi Peak. Finally, we arrive at Uhuru Peak- the highest point on Mount Kilimanjaro and the continent of Africa. From the summit, we now make our descent continuing straight down to the Mweka Hut camp site, stopping at Barafu for lunch. The trail is very rocky and can be quite hard on the knees; trekking poles are helpful. Mweka Camp is situated in the upper forest and mist or rain can be expected in the late afternoon. Later in the evening, we enjoy our last dinner on the mountain and a well-earned sleep.

Health and Safety

Mountains in the world can sometimes be dangerous and hazardous – especially in high altitude. It is therefore important to:

1. Be well equipped
2. Let your expedition leader know your health history
3. Have good communication system
4. Have good basic first aid kit and know how to use it
5. Be able to identify mountain illnesses.

HOW TO RECOGNISE ALTITUDE RELATED ILLNESS

At high altitudes the amount of oxygen decreases dramatically. This can result in medical urgency that must be a concern to every hiker.

AMS (Acute Mountain Sickness)

Signs include: Headache, nausea, fatigue, malaise, loss of appetite and difficulty in sleeping.

Treatment

Slow down, stay in camps, drink water and rest while the body adjusts to the altitude. If symptoms persist after 48 hours descend.

HAPE (High Altitude Pulmonary Aedema)

Symptoms include: Shortened breath during exercise progressing to shortened breath while resting, a dry cough deteriorating to a frothy sputum, audible gurgling (rales) from the chest area, increased heart and breathing rate.

Treatment

Descend immediately and seek medical attention. Descending is the treatment. It can progress quickly to a point where the patient cannot walk. It doesn't improve with rest at the same altitude.

HACE (High Altitude Cerebral Aedema)

Symptoms include:- Ams that progress to severe headaches, loss of co-ordination, slurred speech, irrational behaviour, coma and death.

Treatment

Descend immediately, Hace can quickly progress to lethal stage.

Prevention of AMS, HAPE and HACE

Allow 2 nights at 10,000ft or at higher nuts at around 14,000ft Before proceeding higher, increase fluid intake to 4-6 liters per day. Avoid extreme physical exertion and eat a light diet rich in carbohydrates. Take symptoms seriously. Rest and acclimatize if Ams is suspected. Report to ranger rescues station and descend immediately if Hape or Hace is suspected.

However it is important to drink plenty of water slowly to allow your body get used to the altitude.
